

REPORTING SYSTEM v.2 ENHANCEMENTS

Review Reporting System v.2 Access

This feature runs a report of users that have Reporting System v. 2 access.

The Review Reporting System access report shows which users have access to which accounts as well as which users do not have any access. It also shows users for all locations regardless of access. There are three radio buttons that affect the type of report you run for access:

For all reports, you have the ability to click on links to display information for **all or individual users** of the account.

All Users-displays which users have Reporting System v.2 access to which accounts as well as those users that do not have access to any accounts. This is a comprehensive list.

All Users with Reporting System v.2 access- shows a filtered list only of which users have RS v.2 access.

All Users without access - Shows a list of accounts that are not accessible by any users if the All Users link is selected or a list of accounts an individual user does not have access to.

Create Report by Client ID/User

Allows you to look at a user and all of the databases the user has accessed during a given period. You can run the report by Client ID or User password. This report is only available for one user/client one month at a time. We realize our customers have access to this information already via customizing their reports. This would be available from the dropdown in the report screen for easier access.
